Q: Echo, store, and then echo again in Bash I'm trying to do some file copying in a bash script. I'm writing it using Cygwin. I first do a test if the directory I'm running it on is the right one. If it is, I echo a string. Then I copy a list of files into that directory, if the directories contents match my test condition, I copy those files. My problem is, if the directory doesn't match, I echo that error, but the string I'm echoing isn't echoed. It's like the echo is stored somewhere in memory and isn't being echoed out when I try to echo it again. Here's my code: IFS=\$' ' case "\$1" in p:// /cygdrive/d/data/priv/\*/flif/\*.flif \*) echo "You are in the wrong directory, please type: p://C:/Eff/ ;; esac # I'm almost positive these are unnecessary, but I don 82157476af
